Executive summary	1
Introduction and methodology	3
1 Introduction to paraquat industry in China	6
1.1 Overview of herbicide industry	6
1.2 Position of paraquat in herbicide industry	10
2 Paraquat upstream industry	12
2.1 Brief introduction to raw materials involved in paraquat production	12
2.2 Introduction to major raw materials for paraquat production	12
2.2.1 Pyridine	12
2.2.2 Methyl chloride	19
2.2.3 Impact of raw materials on paraquat industry	20
3 Paraquat industry in China	22
3.1 History of paraquat's development	22
3.2 Production technology of paraquat	26
3.2.1 Brief introduction to two methods for paraquat production	26
3.2.1.1 Cyanide method	26
3.2.1.1.1 Ammoniacal-cyanide (AC) process	26
3.2.1.1.2 Methanol-cyanide (MC) process	27
3.2.1.2 Other methods	28
3.2.2 Comparison of different methods	30
3.2.3 Production cost	31
3.2.4 Current technology level	31
3.2.5 Current research status	32
3.3 Registration of paraquat in China	35
3.4 Supply of paraquat in China, 2012–Q1 2017	38
3.4.1 Supply of paraquat TK	38
3.4.1.1 Production	38
3.4.1.2 Paraquat TK manufacturers	39
3.4.2 Supply of paraquat formulations	41
3.5 Circulation of paraquat in China	42
3.5.1 Price of paraquat, 2012–Q1 2017	42
3.5.2 Export of paraquat, 2012–Q1 2017	44
3.6 Consumption of paraquat in China, 2012–Q1 2017	69
3.6.1 Consumption trends of paraquat	69
3.6.2 Summary of paraquat market (volume and value)	69
3.6.3 Application of paraquat	70
3.6.3.1 Share by regions	70
3.6.3.2 Share by crops	71
4 Forecast on paraquat industry in China	73
4.1 Key factors influencing paraquat industry	73
4.1.1 Demand	73
4.1.2 Policy	74

4.2 Paraquat industry forecast, 2017–2021	79
5 Conclusion	81
6 Profile of major paraquat TK manufacturers in China	82
6.1 Nanjing Red Sun Co., Ltd.	82
6.2 Syngenta Nantong Crop Protection Co., Ltd.	84
6.3 Shandong Luba Chemical Co., Ltd.	85
6.4 Hubei Sanonda Co., Ltd.	87
6.5 Shandong Kexin Biochemical Co., Ltd.	88
6.6 Shandong Lv Feng Pesticide Co., Ltd.	89
6.7 Hebei Shanli Chemical Co., Ltd.	90
6.8 Jiangsu Noon Crop Science Co., Ltd.	91
6.9 Shijiazhuang Baofeng Chemical Co., Ltd.	92
6.10 Hubei Xianlong Chemical Industry Co., Ltd.	93
6.11 Zhejiang Funong Biological Technology Co., Ltd.	94

1. Introduction

CCM's ninth edition report on Chinese paraquat industry, *Market Research on Paraquat in China*, was finished in June 2017. This report attaches importance to the following parts:

- supply of paraquat (capacity, output and key manufacturers) and demand by volume & value in China in 2012–Q1 2017;
- detailed study of paraquat's upstream industry (pyridine's supply, manufacturers, import, price, technology, etc.);
- production technology and production cost of paraquat;
- price of paraquat in 2012–Q1 2017 and export of paraquat products in 2012–Q1 2017;
- forecast on paraquat's supply & demand in China in 2017–2021;
- key factors influencing development of paraquat in China.

2. Approach for this report

This report has been drafted by diverse methods which are as follows:

➤ Desk research

Sources of desk research are various including published magazines, journals, governmental statistics, industrial statistics, customs statistics, associated seminars as well as information from the internet. A lot of works have been done to compile and analyze the information obtained. When necessary, checks were made with Chinese market players regarding market information such as production, demand, consumption and competition.

➤ Telephone interview

The interviewees cover:

- paraquat manufacturers
- agricultural experts & researchers
- traders
- farmers
- industrial associations.

CCM carried out extensive telephone interviews with almost all paraquat TK producers and some formulations producers. From those active producers and even producers who have idled or stopped production, CCM sourced and verified the detailed production and market situation as well as players' comments on paraquat.

In a bid to understand the application of paraquat formulations in China, CCM also made contact with domestic traders, distributors and farmers as well. To directly analyse the export situation of paraquat TK and formulations, many exporters were contacted whenever the verification was needed.

Raw material & intermediate suppliers were also contacted to get the price, supply as well as government policies on raw materials and their impact on paraquat.

➤ Data processing and presentation

The data collected and compiled are sourced from:

- published articles from Chinese periodicals, magazines, journals and third-party databases
- governmental statistics & customs statistics
- telephone interviews with Chinese manufacturers, traders, government and farmers
- comments from industrial experts
- CCM's innovative database
- professional databases from other sources

- information from the internet

The data from various channels have been combined to make this report as precise and scientific as possible. Throughout the process, a series of internal discussions have been held in order to analyse the data and draw conclusions from it.

3. Executive summary

China's herbicide industry has kept developing stably in recent years, reflected by the sharply increasing output and enriching varieties. As the largest supplier of herbicides in the world, China produced about XXX tonnes of herbicides (calculated by 100% technical) in 2016, retaining its top position in the world.

As one of the key non-selective herbicides in the world, paraquat has witnessed a fast development in the past few years in China, which has been playing an increasingly important role in the world.

- Production

China is the largest manufacturer of paraquat TK and formulations in the world. As of May 2017, its paraquat TK capacity has reached XXX t/a (calculated by 42% TK). The output of paraquat TK was XXX tonnes in 2016, up by XXX% year on year.

The output of China's paraquat formulations (calculated by 200g/L AS, similarly hereinafter) has grown fast from XXX tonnes in 2007 to XXX tonnes in 2011 and XXX tonnes in 2016, mainly attributed to the rapid growth of overseas demand.

- Manufacturer

There were XXX active paraquat TK producers in China as of Q1 2017. Key production regions include Shandong, Jiangsu, Hubei and Anhui, whose output accounting for around XXX% of the domestic total in 2016.

The top four producers of paraquat TK in China include Nanjing Red Sun Co., Ltd. (XXX t/a), Syngenta Nantong Crop Protection Co., Ltd. (XX t/a), Shandong Luba Chemical Co., Ltd. (XXX t/a) and Hubei Sanonda Co., Ltd. (XXX t/a).

- Price

The price of paraquat TK in China stopped rising and started to drop in H2 2014. The average ex-works price of paraquat 42% TK reached USDXXX/t in 2014 but dropped to USDXXX/t in Jan.–May 2017.

Affected by the anti-dumping investigation into imported pyridine, the average ex-work price of 99.9% pyridine in China has been increasing sharply since 2013, reaching USDXXX/t in 2013 and USDXXX/t in 2014. But due to the steady domestic supply, the price dropped to USDXXX/t in Jan.-May 2017.

- **Export**

A large proportion of paraquat produced in China is exported annually, with the share of about XXX% in 2016, a historical record high. China's export volume of paraquat TK and formulations were XXX tonnes and XX tonnes in 2016, seeing a yearly growth rate of XXX% and XXX% respectively.

Indonesia was the largest export destination of Chinese paraquat TK in 2016 in terms of export volume, followed by Thailand and the US. And the total export volume of paraquat TK to these three destinations reached XXX% of the national total export volume in 2016. It was XXX% in 2014 and XX% in 2015 respectively.

The top five destinations of China's paraquat formulations are Nigeria, Australia, Ghana, Thailand and Brazil, with their export volume together accounting for XXX% of the national total in 2016.

- **Technology**

As of May 2017, only cyanide method was adopted in China. According to different solvents used, the cyanide methods can be classified into three types of processes, including the ammonia-cyanide (AC) process, the methanol-cyanide (MC) process and the water-cyanide (WC) process.

The WC process has been eliminated in China due to its lack of competitiveness compared with the other two processes. Among the XXX active paraquat TK manufacturers in China, XXX adopt AC process and XXX adopts MC process at present. The capacity adopting AC process and MC process were XXX t/a and XXX t/a as of Q1 2017, respectively.

- **Consumption**

The consumption of paraquat in China kept decreasing in 2015 and 2016, reaching XXX tonnes and XXX tonnes respectively, as influenced by the Notice No. 1745 of ban on sales and use of paraquat AS formulations from June 2016.

In China, paraquat formulations are mainly consumed in orchards and corn fields, with their consumption volume taking up of about XXX% of China's total consumption volume of the products in 2016.

4. What's in this report?

Note: Key data/information in this sample page is hidden, while in the report it is not.

...

Table 1.2-1 Output and consumption of paraquat and corresponding share of all total herbicides in China, 2007–2016

Year	Output, tonne		Share	Consumption, tonne		Share
	Herbicide	Paraquat 42% TK		Herbicide (by 100% technical)	Paraquat (by 100% TK)	
2007	XXX	XXX	XXX	XXX	XXX	XXX
2008	XXX	XXX	XXX	XXX	XXX	XXX
2009	XXX	XXX	XXX	XXX	XXX	XXX
2010	XXX	XXX	XXX	XXX	XXX	XXX

Figure 3.6.1-1 Consumption pattern of paraquat TK (calculated by 42% TK) in China, 2009–Q1 2017

Note: 1) TK here includes 42% TK and 45% TK.

2) Formulations here include 200g/L AS and 250g/L AS.

3) Apparent consumption = Output + Import - Export.
